Name: Md. Abdullah Al Shafi
Project Name: File Sharing System

Project Objective:

The objective is to create a file sharing service implemented using peer-to-peer. There will be a server, which is connected to a database containing information related to shared files. The server can store and retrieve this information in the database. A given client submits a list of files that it desires to share with other users to the server. The server takes this information and stores in the database. A given client can search for shared files by the client name associated with shared files or filename. He/she can also delete files too.

1. User can create account for sign in and sign out.
2. There will be a "Home" page.
3. Option for upload and download files.
4. "Delete" option for removal.
5. There will have auto generated link for each file.

Languages:

1. HTML
2. PHP
3. MySQL
4. CSS
5. JavaScript
